

Hello.

I am a developer who wants to make fun games.

I will try to show you good game resources.

Thank you for purchasing the assets.

Introducing cute girl illustrations and SD character Miho.

Miho consists of cute illustrations and SD characters.

The characters are rigged with skin bones, so you can freely change their movements.

The SD character consists of front and back views, and can move in four directions and move horizontally.

The hands have two game objects each that can be switched between front and back.
